1.	In previous tenders for these items it was always allowed to quote longitudinally ERW pipes. However, in the Sour Service specification that you have sent us, there is mentioned that the pipes should be longitudinally SAW or seamless pipes. Can we quote ERW pipes, or is that no longer technically acceptable?	As we look at annex H in API 5L the only acceptable procedures are SAWL, SAWH and HFW. We didn't want the SAWH (helix weld), both SAWL(longitudinal) and HFW are acceptable ERW with a high frequency current is basically HFW, and acceptable All we ask for ERW produced pipes to be welded with a high frequency current (not a low frequency current).
2.	For item 2 the mill is not able to produce only 48 meter. They need minimum 240 meter in order to be able to quote. You insist on 48 meter, but in this case we will not be able to quote. However, we gladly would like to submit a complete quotation. Can you reconsider your reply for item 2, and accept 240 meter? Or cancel this item from the tender?	Not approved.
3.	The closing date for the tender is Monday 28 th of November 2022. Since new questions came up from our side, are you able to extend the bid due date with 1 week?	The deadline for submitting proposals will be postponed to 05 th of December on 11:00, Israel time.
